

BIG GAME HUNT

A PUZZLE EXTRAVAGANZA

BY MANX

First Presented at the 2011 National Puzzlers' League Convention

The puzzles that follow were first presented as a puzzle extravaganza at the 2011 National Puzzlers' League convention in Providence, Rhode Island. Teams of solvers at that event started with a set of five of the puzzles, and each time they completed a puzzle they turned it in for another puzzle. Since the actual order of puzzles is not important to solving, that sequential nature is not duplicated in these pages—you can solve the puzzles in whatever order you like (although we'll have a few notes on this later).

Each puzzle is based on a popular board game or card game, either commercial or generic, and each one leads to an answer which is also the name of board game or card game, with two exceptions: The "Clue" puzzle answer is a solution to a game of Clue—the suspect, weapon, and room; and the final puzzle, "Mastermind" leads to an answer phrase that is not the name of a game.

You should keep a few pointers in mind:

- The "Clue" puzzle is essentially a scavenger hunt among all the clues and answers of the other puzzles, so it's a good idea to read the instructions to that puzzle before solving anything.
- As is often the case with puzzle extravaganzas, there are two puzzles in this set that individually do not yield answers but must instead be combined to yield a single answer.
- The final puzzle, "Mastermind," should only be solved after you have solved all of the other puzzles.

CLUE

ANSWER

SUSPECT

ROOM

WEAPON

You'll be playing a game of Clue while solving all of the puzzles. In order to determine the identity of the murderer, the room in which the murder took place, and the weapon used, you'll need to eliminate five of the six suspects, five of the six weapons, and eight of the nine rooms. Each puzzle that bears an empty magnifying glass symbol will include either the last name of a suspect or the name of a weapon as an answer that you will fill in. (It will always be a discrete answer and not merely formed by filling in other answers.) Each puzzle that bears a magnifying glass symbol with an R includes the full name of one of the rooms somewhere in its clues. (Again, the name of the room will appear as a discrete word or phrase and not be hidden.) In one case, indicated by two magnifying glass symbols with R's, you will find two rooms within the clues. You can eliminate the suspects, weapons, and rooms as you find them. When you have determined the identity of the murderer, the room, and the weapon, fill them in the blank above and turn in your solution.

CRAZY EIGHTS

ANSWER

All of the answers in this puzzle are eight-letter words and phrases, each of which must be entered in the eight spaces surrounding one of the shaded squares in the grid, reading either clockwise or counterclockwise. Answers to the numbered clues circle the correspondingly numbered squares; one letter has been placed in each of the first five as a start. Answers to the unnumbered clues circle the remaining squares (except for the middle square, whose answer is unclued); which unnumbered clue goes with which square is left for you to determine.

BATTLESHIP

ANSWER

This puzzle is a solitaire version of the classic game of Battleship. The grid represents a section of ocean in which the entire fleet is hiding. This fleet consists of one battleship (four grid squares in length), two cruisers (each three squares long), three destroyers (each two squares long), and four submarines (one square each). The ships may be oriented either horizontally or vertically, and no two ships will occupy adjacent grid squares, even diagonally. The digits along the sides of the grid indicate the number of grid squares in the corresponding rows and columns that are occupied by vessels. In this puzzle, three "shots," all misses, have been taken to start you off.

LIARS DICE

ANSWER

First identify the six-letter word represented by each of the seven pictures and write it in the corresponding set of blanks. Then for each of these words, using the order of the letters 1 to 6 as indicated by the dice at the top of the grid, rearrange the letters as indicated by one of the seven sets of dice below (which one is left for you to determine) and you'll get the last name of a well-known liar—more specifically, a well-known writer. But wait! These are Liars Dice, after all, so one letter in each set will be wrong and will need to be changed to a different letter to spell the writer's name.

REVERSI

ANSWER

When completed, every row and column of this cryptic puzzle will contain two answers, clued in order in each pair below. Some of these answers must be reversed before they are entered into the grid. For example, a row might contain two words reading from left to right, two words reading from right to left, or one of each in either order. Finding the puzzle's final answer may take some fleet thinking.

TABOO

ANSWER

From the rules of Taboo: "The word at the top of the card is the Guess Word the Clue-giver is trying to get his or her teammates to say. The five words below the Guess Word are the TABOO words the Clue-giver CANNOT say when giving clues for the Guess Word."

LABYRINTH

ANSWER

Answers fit into this labyrinth in two ways. The Across clues, given in pairs, indicate in order the two answers in each row of the grid. The Winding clues indicate a string of answers that begins in the upper left corner and winds through the labyrinth to the lower right corner. Of course, what challenge would a labyrinth be without some holes? You'll find that the Winding answers will be interrupted in a number of places by holes—letters that are part of the Across answers but not the Winding answers. The letters in these holes, in winding order, give the puzzle's answer.

CHESS

ANSWER

Each rank and file of this chessboard will contain two answers when it is filled in. Clues for these answers are presented in four sets: answers that read across are clued by Left Side (words that begin at the left edge of the board) or Right Side (words that end at the right edge of the board), and answers that read down are clued by Top Side (words that begin at the top edge of the board) or Bottom Side (words that end at the bottom edge of the board). Clues within each of these sets are given in random order. When the board is filled, place a knight on the first square (indicated by a shaded circle) and make 19 knight moves, ending on the other shaded square and spelling out an instruction with this enumeration:

4 3 6 7

LEFT SIDE

- Player who always moves first in a chess game
- Give an address
- Highest active volcano in Europe
- Wrap up
- Financial aid criterion
- Heads out
- Ending for Canton or Taiwan
